

NATHAN HARRIS

Denver / Boulder, CO · (919) 475-5685 · harrish96@gmail.com · linkedin.com/in/nathan-harris13

I'm an organizational architect. I was placed inside a Fortune 50 turnaround early and saw the whole cross-section of it — technology and the business processes it was supposed to serve, then every application team in the program as the audit point of contact, which meant seeing how each one actually operated against the standard rather than how they described it. That vantage point is the thing. Most operators know their own function deeply. I know how functions fail against each other, where decisions actually get made, and what has to exist before execution can hold. I build and repair the machinery a business unit runs on.

The pattern I found running at the biggest fires on the global technology and operations side of Fortune 500s is that the fire is rarely the problem. A multi-year ERP consolidation collapsed after millions in sunk cost, with the original architects gone and financial close under executive scrutiny: I owned the rollback and delivered it with **zero critical defects and no disruption to close**. Hired to modernize performance reporting for a \$100M ARR business unit: the metrics weren't broken, the intake was — so I rebuilt how work entered the organization first, eliminating 25%+ duplicated effort. Eight years inside MetLife and IQVIA in different shapes: the change control board governing 50+ application teams on a \$200M transformation, the \$125M budget covering every enterprise system at a \$15B company, an enterprise PMO built from nothing.

I deliver, and I build the environment other people deliver in. Most operators do one. Scope first, title after — five promotions in five years to Associate Director by 25.

EXPERIENCE

Principal Consultant — Operations & Transformation · Left Brain Consulting

Denver, CO · Oct 2025 – Present

- Independent practice advising founder-led and PE-backed companies on execution, capacity, and decision governance — the same work delivered inside the enterprise, at mid-market scale.
- Built and productized a decision-governance methodology that installs a single intake, a scoring model calibrated across functions, a capacity-checked portfolio, and a review cadence — delivered as a fixed-scope, fixed-fee engagement.
- Co-founder of **Blotto**, a scientific SaaS product taken from prototype to paying customers alongside a technical co-founder — owning infrastructure, deployment, pricing, and go-to-market.

Associate Director, Business Operations (Product) · IQVIA · Fortune ~275

Remote, CO · May 2022 – Oct 2025 · Promoted from Manager within one year

- **Rebuilt work and performance management for a \$100M ARR, ~1,000-person business unit running as three regional silos.** Engaged to modernize reporting; diagnosed that work entered through multiple uncoordinated paths, making every metric unreliable. Went back to leadership, re-scoped the mandate, and fixed the pipeline first.
- Designed a single centralized intake, a review board evaluating on business impact, readiness, dependencies, and capacity, and a unified release cadence — **eliminating 25%+ duplicated effort** across global enablement teams.
- Reallocated **\$5M of a \$50M expense base** from competitive and duplicated work to protect the \$45M core running the business.
- Replaced Excel-dependent tracking with a data warehouse and automated Power BI / Spotfire reporting, moving **900+ FTEs** onto shared, trusted KPIs.
- Integrated Salesforce CRM with PSA time-card data to standardize profitability analysis and show leadership where operational effort actually created leverage.
- Led the enterprise AI rollout across **25,000+ resources** — use cases, legal exposure, and the governance structure that decided what was permitted.
- The system is **still running after a change in leadership at the top.**

Manager, Enterprise Business Technology (CIO Organization) · IQVIA

Remote · Jun 2021 – May 2022

- **Owned the rollback of a failed multi-year ERP consolidation** inside a ~\$15B enterprise. Migration architects and SMEs had exited, documentation was incomplete, and financial systems were under elevated scrutiny. Acted as de facto architecture, delivery, and integration lead: rebuilt system understanding from first principles, wrote dependency-aware cutover plans, and sequenced weekend deployments around month-end and quarter-end close.
- **Zero critical defects across every production deployment. No disruption to financial close or reporting cycles.** Restored a stable dual-ERP operating model and left behind release governance, standardized production support, and upgrade playbooks so future delivery did not depend on me.
- Owned the **\$125M annual budget and roadmap for every enterprise system** — 300+ approved vendors through annual planning, with year-over-year visibility that made renew-or-cut decisions defensible instead of political. Lifted forecast accuracy 10% and cut reporting overhead 33%.
- Closed automation gaps in global finance where manual process had become systemic risk; partnered with InfoSec to eliminate ungoverned tools and reduce data exposure.
- Led the initial enterprise AI rollout across 25,000+ resources — use cases, legal exposure, and governance structure.

Technical Program Manager, Transformation · MetLife · Fortune ~50

Cary, NC · May 2018 – Jun 2021 · *Preceded by a 5-month enterprise leadership program (Jan–May 2018)*

- **Founded and chaired an enterprise Change Control Board governing 50+ application development teams** — built where no governance existed, centralizing decision rights and managing 1,000+ executive-level change requests to get the new operating platform live.
- Authored the decision records and executive briefs for the CIO and SVPs across a **\$200M+ digital transformation portfolio** inside a \$2B ARR business unit, and designed the operating cadences that determined what got decided where.
- Served as the execution bridge between IT and business leadership across Tier 1 partners including IBM, EY, FINEOS, and Cognizant — facilitating delivery office hours averaging 25+ SMEs across two \$100M+ programs.
- Central production support contact during the migration of a \$2B+ ARR business, establishing the coordination framework for resolving defects across business and IT systems.
- **Served as the program's audit point of contact** — the seat that reviewed every team's submissions against the enterprise standard. It meant seeing how all 50+ teams actually operated rather than how they described operating, and it is the reason I can read where execution breaks across functions instead of inside one.

CAPABILITIES

Governance & Operating Design · Decision governance, intake and prioritization design, PMO architecture, operating cadence, change control

Delivery & Implementation · ERP cutover and rollback, release governance, production support models, cross-functional execution

Financial & Commercial · Budget ownership (\$125M+), vendor and spend management, forecast modeling, profitability analysis

Executive Engagement · CIO/C-suite communication, decision records, board-level artifacts, workshop facilitation

Tools · Jira, Smartsheet, Salesforce, PSA, SAP / Oracle / PeopleSoft, Power BI, Spotfire, AI-native workflows

EDUCATION

University of North Carolina at Wilmington — B.S. Business Administration, Management Information Systems
